

User Interface Testing

A google forms survey was created with questions, an image and interactive Figma prototype to obtain feedback on usability, functionality and aesthetic.

Unfortunately, we did not receive responses from the intended stakeholder (coaches), so it was conducted with a variety of testers with beginner to intermediate level computer skills to gain overall feedback.

Google Form Results:

Summary

Question

Individual

What is your role? (Coach, tester, etc.)

8 responses

Chris (Engineering student - tester)

Ashleigh (Casual internet user)

Naomi (Tester)

Emma (Film Student)

Chloe (Computer science student)

Steve (Engineering student - tester)

Iona (tester)

Daniel (Design Student - tester)

What did you like about the interface?

8 responses

I liked that the system was simple enough to follow without needing technical knowledge. The highlighted boxes helped me understand what was being tracked.

I liked how easy the system was to understand even without a technical background. The highlighted boxes and labels made it clear what the software was tracking during the video.

I liked the separate pages and how the colours match the logo!

The system looks organized and the detection boxes update clearly on the video feed. I also liked that the stats page summarizes detections instead of forcing users to rewatch the footage.

I liked that the video and statistics were separated into different pages because it made things feel less cluttered. The colored boxes on the video also made it easy to see what the system was tracking.

I really liked how the first layout was easy to use like a YouTube layout and the legend.

Clean layout and good separation between video and statistics.

Is there anything you would like to see added?

8 responses

It would be great to have downloadable reports or screenshots from detections.

Labels or descriptions for the graphs

A short introduction or tutorial for first-time users would make the system even more user-friendly.

Maybe larger buttons to see better

A timeline showing where detections happen during the video would be useful.

Maybe a small help section explaining the graphs and terms used.

Information on the graphs and maybe the company logo would be cool

A short summary or highlights section for quick insights.

What if anything was clear or confusing?

8 responses

The main controls and layout were very intuitive and easy to use

Just unsure what the graphs do

No

It was clear how to play the video, but I wasn't immediately sure what each coloured box meant without looking closely.

The main functionality was clear, but I wasn't sure if the detections were happening live or after the video was processed.

The video controls were easy to understand, but I didn't fully understand what the confidence percentage meant.

Confusion about what the graphs were measuring.

Navigation between pages was clear, but the stats page felt slightly overwhelming at first.

What do you dislike about the interface?

8 responses

The graphs could use clearer labels and maybe brighter colours

Nothing, looks good

There are a few areas where the text could be larger, especially on the statistics page.

The main screen feels a bit busy with too many elements at once.

The design feels slightly outdated, especially the buttons and color choices.

The statistics page feels a bit packed with information, and some of the text is too small to read comfortably.

Some of the sections looked crowded

Some text and UI elements are quite small.

Is there anything you would change about the current interface?

8 responses

Only minor things like the spacing on main page is slightly cluttered and buttons could be enlarged.

Larger text and more labels maybe

No I like the design

Make key buttons like "View Full Stats" stand out more.

I would modernize the layout and improve spacing between sections.

I would make the statistics bigger and easier to read.

I would make the graphs interactive so users can hover over data points for more detail.

Increase font sizes and spacing for readability.

Overall Findings:

Strengths

- Easy to use
- Clear video controls
- Colour coding helps users understand detections
- Good separation between video and statistics pages
- Layout is simple and organized

Weaknesses

- Statistics page feels crowded
- Some text is too small
- Graphs are confusing at times
- Design looks slightly outdated

Future Improvements and potential

- Add help/tooltips for graphs and statistics
- Make text and graphs larger
- Improve the visual design
- Add interactive graphs
- Add a video timeline for detections
- Add Fullscreen and dark mode
- Allow report downloads
