

# User Stories

## Caelan:

- **As a Data Analyst**, I want to generate offside data automatically from recorded sessions, so I can review match statistics more accurately and efficiently.
- **As a Rugby Union coach**, I want a program that highlights offsides that are often missed, so I can put more focus on team training and development.
- **As a Rugby Union coach**, I want to see data on an opposing team's offsides, so I can analyse their weaknesses and develop a strategy to win.
- **As a Rugby Union coach**, I want offsides displayed clearly through a digital interface, so I can train new players and explain the rule more effectively.
- **As an IT Specialist**, I want a program that demonstrates how a manual process can be automated with computer vision, so it can act as inspiration for future technology projects.
- **As a data analyst** I want a clear and visually appealing user interface so that I can visualise the offsides easily.
- **As a data analyst** I want comprehensible and easy to use front end design that is simple to navigate and allows me to use the application efficiently.
- **As a team** We want clear documentation that explains the code functionality in detail so that it can easily be modified and understood across future projects and where required.
- **As a team** we want to track our progress using a progress management tool so that we can consistently achieve results and manage our time.

## Michael:

- **As a Data Analyst**, I want to be able to bulk-upload many match clips so that I can get offside results faster and review them in one place.
- **As a Data Analyst**, I want a program that will automatically determine offside events, so that I do not need to click anything.
- **As a Rugby Union coach**, I want offside results grouped by confidence levels, so that I can triage what to trust, what to review and what to ignore.
- **As a Rugby Union coach**, I want results presented in a way I can demonstrate to others, so that players, staff and referees can clearly understand what happened.
- **As a Data Analyst**, I want visualisations identifying the offside line, so I can verify detections and explain how the model reached its result.

- **As a Rugby Union coach / Data Analyst**, I want the model to work across multiple stadiums without manual setup, so that offsides are detected reliably regardless of venue.

### Harrison:

- **As a Rugby Union coach**, I want a system that can identify offsides in real-time during a game, showing the percentage and allowing me to review it.
- **As a Rugby Union coach / Data Analyst**, I want to be able to identify trends in what offsides are being caught/missed by the umpires, so that I can ensure that my players are making the most of these same opportunities.
- **As a supporter of the Queensland Reds**, I want to trust that players from the opposition are getting caught when not playing the game by the rules.

### Iwan:

- **As a Data Analyst**, I want a logging system that records detections and errors in a structured format, so I can quickly diagnose issues and improve reliability.
- **As a Rugby Union coach**, I want automated reports summarising all detected offsides after each match, so I can easily review player performance without re-watching full games.
- **As a Rugby Union coach / Data Analyst**, I want the system to highlight offside detections with video timestamps, so I can jump directly to key moments during match analysis.
- **As a Data Analyst**, I want batch processing of multiple match clips to run unattended, so I can save time and focus on interpreting results instead of managing input files.
- **As an IT Specialist**, I want the system to demonstrate scalability across different hardware setups, so I can assess its potential for wider adoption in professional sports.
